**AUSTRALIAN
DESIGNED & MADE**

Controls sanitiser & pH levels

Automates feeding process

Helps maintain chemistry levels

Ensures a healthy and safe
swimming environment

Reduces time & maintenance

RC9 AUTOMATIC CONTROL SYSTEM

The RC9 provides advanced measure and control of your sanitiser and pH levels. Keeping your pH at the optimal levels means your sanitiser is more effective, ensuring you use the exact amount, no waste. The RC9 Series is designed to automate the feeding of these liquid based products for a safe and healthy pool.

By constantly measuring and dosing sanitiser and/or acid to maintain the correct set point, the RC9 controller ensures the quality of the water kept within ideal ranges, regardless of bather load or weather conditions. This helps ensure a safe, healthy swimming pool environment with sparkling clean water.

The RC9 can be programmed to operate your filter pump. A spa function automatically changes the dosing rate when isolating your spa pool from the swimming pool. And of course, the RC9 virtually eliminates manual dosing of sanitiser and pH adjusters in your pool or spa.
